CLASS

CLASE I / CLASS I

Estos aparatos deben tener su chasis conectado a una toma de tierra por un conductor (de color amarillo/verde en la mayoría de los países y verde en los Estados Unidos, Canadá y Japón).

Un fallo en el aparato que hace que un conductor con tensión entre contacto con la carcasa lo que causará un flujo de corriente en el conductor de tierra. Esta corriente debe pasar a través de un dispositivo de protección contra sobrecorriente (fusible o interruptor magnetotérmico) o un interruptor diferencial (interruptor de circuito por falla de tierra), que cortará el suministro de electricidad en el aparato.

These appliances must have their chassis connected to electrical earth (US: ground) by an earth conductor (coloured green/yellow in most countries, green in the U.S., Canada and Japan). A fault in the appliance which causes a live conductor to contact the casing will cause a current to flow in the earth conductor. This current should trip either an overcurrent device (fuse or circuit breaker (CB)) or a residual-current device (RCD) also named as residual current circuit breaker (RCCB), or (ground fault circuit interrupter (GFCI)) or also, residual current operated circuit-breaker with integral overcurrent protection (RCBO). which will cut off the supply of electricity to the appliance.

CLASE II / CLASS II

Dispositivo de Clase II o aparato con doble aislamiento eléctrico es uno que ha sido diseñado de tal forma que no requiere una toma a tierra de seguridad eléctrica.

El requisito básico es que un fallo simple no puede dar lugar a tensiones peligrosas que se exponga lo que podría causar una descarga eléctrica y que esto se logra sin depender de una caja metálica conectada a tierra. Esto se consigue normalmente por que tiene dos capas de material aislante que rodea las partes con tensiones peligrosas o utilizando un aislamiento reforzado.

En Europa, un aparato de doble aislamiento deben ser etiquetados como clase II, doble aislamiento y llevan el símbolo de doble aislamiento (un cuadrado dentro de otro cuadrado).

A Class II or double insulated electrical appliance is one which has been designed in such a way that it does not require a safety connection to electrical earth (US: ground).

The basic requirement is that no single failure can result in dangerous voltage becoming exposed so that it might cause an electric shock and that this is achieved without relying on an earthed metal casing. This is usually achieved at least in part by having two layers of insulating material surrounding live parts or by using reinforced insulation.

In Europe, a double insulated appliance must be labelled Class II, double insulated, or bear the double insulation symbol (a square inside another square).

CLASE III / CLASS III

Un aparato de Clase III está diseñado para ser alimentado por una fuente de alimentación SELV (por sus siglas en inglés: "Separated or Safety Extra-Low Voltage"). La tensión de una fuente de SELV es lo suficientemente bajo para que, en condiciones normales, una persona puede entrar en contacto con ella sin correr el riesgo de descarga eléctrica. Por tanto no es necesario incorporar la seguridad que llevan los aparatos de Clase I y Clase II. Para el cumplimiento de los dispositivos médicos la Clase III no se considera suficiente la protección.

A Class III appliance is designed to be supplied from a separated/safety extra-low voltage (SELV) power source. The voltage from a SELV supply is low enough that under normal conditions a person can safely come into contact with it without risk of electrical shock. The extra safety features built into Class I and Class II appliances are therefore not required. For medical devices compliance with Class III is not considered sufficient protection.

IP

Primera cifra	Grado de protección: Protección contra cuerpos extraños	
	Descripción abreviada	Tipo de protección proporcionada por la envolvente
0	No protegida	Sin protección particular
1	Protegida contra los cuerpos sólidos de más de 50 mm	Una gran superficie del cuerpo humano tal como la mano (pero no protegida contra una penetración deliberada). Cuerpos sólidos con un diámetro superior a 50 mm
2	Protegida contra los cuerpos sólidos de más de 12 mm	Los dedos u objetos análogos que no excedan una longitud de 80 mm. Cuerpos sólidos con un diámetro superior a 12 mm
3	Protegida contra cuerpos sólidos de más de 2,5 mm	Herramientas, alambres, etc., con diámetro o espesor superior a 2,5 mm. Cuerpos sólidos con un diámetro superior a 2,5 mm
4	Protegida contra cuerpos sólidos de más de 1,0 mm	Alambres o cintas con un espesor superior a 1,0 mm. Cuerpos sólidos con un diámetro superior a 1,0 mm
5	Protegida contra la penetración de polvo	No se impide totalmente la entrada de polvo, pero sin que el polvo entre en cantidad suficiente que llegue a perjudicar el funcionamiento satisfactorio del equipo
6	Totalmente estanco al polvo	Ninguna entrada de polvo

Segunda cifra	Grado de protección: Protección contra el agua	
	Descripción abreviada	Tipo de protección proporcionada por la envolvente
0	No protegida	Sin protección particular
1	Protegida contra la caída vertical de gotas de agua	La caída vertical de gotas de agua no deben tener efectos perjudiciales
2	Protegida contra la caída de gotas de agua con una inclinación máxima de 15°	Las caídas verticales de gotas de agua no deben tener efectos perjudiciales cuando la envolvente está inclinada hasta 15° con respecto a la posición normal
3	Protegida contra la lluvia fina (pulverizada)	El agua pulverizada de lluvia que cae en una dirección que forma un ángulo de hasta 60° con la vertical, no debe tener efectos perjudiciales
4	Protegida contra las proyecciones de agua	El agua proyectada en todas las direcciones sobre la envolvente no debe tener efectos perjudiciales
5	Protegida contra los chorros de agua	El agua proyectada con la ayuda de una boquilla, en todas las direcciones, sobre la envolvente, no debe tener efectos perjudiciales
6	Protegida contra mar gruesa	Con mar gruesa, o bajo los efectos de potentes chorros, el agua no debe penetrar en la envolvente en cantidades perjudiciales
7	Protegida contra los efectos de la inmersión	Cuando se sumerge la envolvente en agua en unas condiciones de presión y con una duración determinada, no debe ser posible la penetración de agua en el interior de la envolvente en cantidades perjudiciales
8	Protegida contra la inmersión prolongada	El equipo es adecuado para la inmersión prolongada en agua bajo las condiciones especificadas por el fabricante. NOTA: Esto significa normalmente que el equipo es rigurosamente estanco. No obstante, para ciertos tipos de equipos, esto puede significar que el agua pueda penetrar pero solo de manera que no produzca efectos perjudiciales.

First Digit	Protection Grade: Protection against solid bodies penetration	
	Short Description	Achieved protection for enclosure

Second Digit	Protection Grade: Protection against penetration by water	
	Short Description	Achieved protection for enclosure
0	No protection	No particular protection
1	Protected against drops of water falling vertically	Vertically falling water drops must have no harmful effect
2	Protected against drops of water falling at a maximum inclination of 15°	Vertical falling drops of water should not have adverse effects when the enclosure is inclined to 15° from the normal position
3	Protected against direct rain	The spray of rain falling in a direction at an angle of 60° with the vertical shall have no harmful effects
4	Protected against splashes of water	Water projected in all directions on the enclosure shall have no harmful effects
5	Protected against jets of water	Water projected with the help of a nozzle, in all directions, on the enclosure, must not have harmful effects
6	Protected against high tide	With heavy tide, or under the influence of powerful jets, water must not enter the enclosure in harmful quantities
7	Protected against plunging effects	When the enclosure is installed under water under pressure conditions and with a certain duration, water penetration should not be possible inside the enclosure in harmful amounts
8	Protected against long immersion	The equipment is suitable for prolonged immersion in water under conditions specified by the manufacturer. NOTE: This usually means that the product is thoroughly sealed. However, for certain types of equipment, it can mean that water can enter but only so as not to cause harmful effects.
