INCANDESCENTE / INCANDESCENT

ECO CLASSIC

Para cambiar la bombilla existente, se puede utilizar la siguiente tabla de conversión para encontrar la potencia adecuada:

To replace your existing lightbulb you can use the following conversion to find the correct replacing wattage:

INCANDESCENTE INCANDESCENT	ECO CLASSIC ECO CLASSIC	BAJO CONSUMO CFL	TIPO BOMBILLA (*) TYPE OF LAMP (*)	EFICIENCIA EFFICIENCY	LUZ LIGHT	TEMPERATURA TEMPERATURE
25 W	20 W	5 W	Incandescente Incandescent	10-12 lm / W	LUZ DE DÍA DAYLIGHT	5000 K
40 W	30 W	8 W	Halógena Halogen	25-40 lm / W	BLANCO FRÍO COOL WHITE	4200 K
60 W	46 W	12 W	Fluorescente Compacta CFL	30-50 lm / W	HALÓGENA HALOGEN	3000 K
75 W	57 W	15 W	LED	30-70 lm / W	BLANCO CÁLIDO WARM WHITE	2700 K
100 W	77 W	20 W			INCANDESCENTE INCANDESCENT	2500 K

Al adquirir reposiciones de bombillas de bajo consumo, asegúrese de la temperatura, "el color de la luz", expresado en grados Kelvin o simplemente en K, que debe ser normalmente de alrededor de unos 2700K. En caso de fluorescencia compacta o LED, verifique los lm/w (eficiencia). Al mismo tiempo, es importante comprobar los lumens, de este modo conseguiremos la misma calidad de luz que teníamos antes con luz incandescente.

A continuación, detallamos información para poder adaptar correctamente los productos de BOVER a las nuevas circunstancias:

- Para tener una idea de la potencia de una bombilla de bajo consumo, se debe dividir el total de Lumens por 10. Normalmente la descripción se encuentra en el embalaje de la bombilla. Esta fórmula nos da la potencia equivalente a una incandescente similar.

Una bombilla de 3 W Led con retroalimentación con un rendimiento de 90 Lumens, puede ser equiparable a una incandescente: $90/10 = 9W$, en este caso la bombilla de Led podría reemplazar una incandescente de 9W.

- Si la eficiencia viene dada en Lumens por vatios, se puede multiplicar la potencia (W) x el valor lm/w para conocer el total de Lumens. Posteriormente dividiremos el total de Lumens por 10 para encontrar el nº de vatios equivalente a una bombilla incandescente.

Una bombilla de 3W Led con retroalimentación con una eficiencia de 48lm/w sería equiparable a una incandescente mediante: $3 \times 48 = 144/10 = 14,4W$, en este caso, la bombilla Led podría ser reemplazada por una incandescente de 15 W.

When purchasing Energy saving replacements please make sure the light temperature, "the color of light" expressed in degrees Kelvin, or simple K, is normally around 2700 K. In the case of CFL or LED retrofit globes please checked the lm/w (efficiency) and at the same time it's important to check the lumens to find out if it can match your previous incandescent light source.

Following we detail you information in order to help you to adapt correctly the BOVER products to the new circumstances:

- To roughly convert the power of the Energy saving bulb, you should divide the given amount of Lumen by 10. Normally the description is on the packaging bulb. This gives you the wattage of a comparable incandescent globe with similar output.

A retrofit Led bulb of 3 W with a total output of 90 Lumen can be translated to it's incandescent equivalent by: $90/10 = 9$ in this case the Led bulb could replace a 9 W incandescent bulb.

- If efficiency is given in Lumen per Watt, you can multiply the rated wattage (W) x the lm/W (value) to know the total Lumen. You can then divide the total Lumen by 10 to find the equivalent wattage for an incandescent bulb.

A retrofit Led bulb of 3 W with an efficiency of 48 lm/W can be translated to it's incandescent equivalent by: $3 \times 48 = 144$ lm;
 $144/10 = 14,4$ W in this case the Led bulb could replace a 15 W incandescent bulb.
